Revenue & Usage Page: Mukammal Data Guide aur Accuracy Check

Admin dashboard, Revenue & Usage (Usage Products aur Subscription Products tabs). Doosra, azaad review 30 October 2026 ko main branch ke live code (commit e93b48df) par kiya gaya.

1. Ek paragraph mein faisla

Is page ke numbers platform ke stored data se bilkul sahi calculate ho rahe hain. Maine har figure ko wapas us database row tak trace kiya jahan se woh aati hai, aur system ki har us jagah ko dobara check kiya jo yeh rows likhti hai. Koi calculation ki ghalti, double count ya missing source nahi mila. Haan, numbers *ghalat lag* sakte hain agar unhein ghalat expectation ke saath parha jaye; section 7 mein har aisa case aur us ki wajah di gayi hai. Ek imaandar limit baqi hai: Cost column woh price hai jo clients se charge hui, woh nahi jo JewlX apne AI suppliers ko deta hai (section 8).

Is baar kya check hua

Check	Nateeja
Har AI feature ek hi billing helper se guzarta hai aur 6 maloom feature names mein se ek use karta hai	Haan. ring_chat, help_chat, ring_preview, grillz_preview, enquiry_preview, cost_estimate. Koi AI function kisi aur tareeqe se usage nahi likhta.
Wallet mein paisa aane ka har raasta classify hai	Haan. Stripe credit pack (topup), auto-recharge, admin top-up (credit). Code mein koi aur positive row type nahi. Purana welcome-bonus trigger jo $2.50 purchased wallet mein daalta tha, April 2026 mein hata diya gaya.
Wallet se paisa nikalne ka har raasta classify hai	Haan. AI usage (6 features), 365-din credit expiry, Stripe refund claw-back, admin reset-to-zero, admin pause. Sirf 6 AI features Cost mein ginte hain.
Har client ki ek wallet row aur ek subscription row	Haan, dono par client_id ka unique index hai, is liye join se kisi client ke figures double nahi ho sakte.
Archive kiye gaye usage counts double nahi gin sakte	Haan. Archive job purani rows monthly summary mein jama karta hai aur usi step mein live log se delete karta hai.
Internal/test flag admin dashboard jaisa hi hai	Haan, dono wahi clients.exclude_from_admin_revenue flag use karte hain.
Page code aur database function ab bhi match karte hain	Haan. 21 Oct ke baad page ki koi file nahi badli. Lovable jo type file live database se regenerate karta hai (aakhri 29 Oct) us mein naya function shape maujood hai, yani migration apply ho chuki hai.

2. AI credit ka paisa kaise chalta hai (page ke peeche ka model)

Har sub-account ka ek **AI wallet** hai. Us mein do qism ka credit saath saath rehta hai:

- **Purchased credits** (asli paisa). Client Stripe par credit pack khareedta hai, ya balance kam hone par auto-recharge chalta hai. Admin bhi haath se credits daal sakta hai. Purchased credits aakhri top-up ke 365 din baad expire ho jate hain.
- **Free monthly credits** (paisa nahi). Har account ko mahana allowance milta hai (filhal $2.50, jab tak AI Cost settings mein na badla jaye). Yeh alag table mein rehte hain aur pehle kharch hote hain.

Har AI request (chat ka jawab, image render, cost estimate) **client price** par charge hoti hai = base cost x multiplier (AI Cost settings se). Charge pehle free credits se katti hai, phir purchased se. Har charge ek transaction row likhti hai aur har request ek usage-log row bhi. Page inhi do qism ki rows se banta hai.

Event	Kya likha jata hai	Page is ko kaise leta hai
Stripe credit pack khareeda	Positive wallet row, type topup	Revenue (paid)
Auto-recharge chala	Positive wallet row, type auto_recharge	Revenue (paid)
Admin ne haath se credits diye	Positive wallet row, type credit	Revenue, alag se admin-granted dikhaya; Paid top-ups only ON ho to nikal diya jata hai
Credit purchase ka Stripe refund	Negative wallet row, Refund clawback	Revenue se minus
AI chat jawab	Negative wallet row + usage log, feature ring_chat / help_chat	Cost (chat) aur Chats count
AI image render	Negative wallet row + usage log, feature *_preview	Cost (image) aur Images count
Cost estimate	Negative wallet row + usage log, feature cost_estimate	Cost (estimate) aur Estimates count
Charge free credits se ada hui	Wahi negative row, description ke aakhir mein (free credits)	Phir bhi Cost; saath mein 'free credits se ada' mein bhi dikhta hai
Purchased credits 365 din baad expire	Negative wallet row, Purchased credits expired	Non-usage debit, Cost NAHI
Admin ne wallet reset ya pause kiya	Negative wallet row, Admin: ...	Non-usage debit, Cost NAHI
Free monthly grant aaya	Sirf free-credit table mein row	Na Revenue, na transaction mein dikhta hai

3. Usage Products tab, ek ek item

Is tab par sab kuch chuni hui date range tak mehdood hai, siwaye Wallet column aur drawer ke free-credit figures ke, jo aaj ka live balance hain.

Filters aur switches

Control	Kya karta hai	Default
Sub-account	Ek client dikhata hai ya sab. Table ke upar ke totals isi selection ke mutabiq hote hain.	All Sub-accounts
Product (All / AI Chat / AI Image / Cost Estimate)	Ek product chunne par list mein sirf woh clients rehte hain jinhon ne woh product use kiya, aur Cost tile aur column sirf usi product ki cost dikhate hain. Profit aur Margin dash dikhate hain, kyunke top-up kisi ek product se bandha nahi hota.	All Products
Start date / End date	Dono din poore shamil hote hain (00:00 se 23:59 local time).	Pichle 120 din se aaj tak
Paid top-ups only	ON: Revenue = sirf Stripe credit packs + auto-recharges. OFF: admin ke diye credits bhi jama. Free monthly credits dono halaton mein kabhi revenue nahi.	OFF
Include internal / test accounts	ON karne par JewlX ke apne aur doosre flagged test accounts list aur totals mein aa jate hain. Un par internal badge hota hai.	OFF
Refresh	Maujooda range ke saath query dobara chalata hai, taake page khulne ke baad bani rows bhi aa jayen.	
Export	Nazar aane wali rows CSV mein download karta hai, har underlying field ke saath, un breakdown fields samet jo table mein nahi dikhte.	

Chaar KPI tiles

Tile	Formula	Source rows
Total Revenue	Paid top-ups + admin-granted credits (agar Paid top-ups only OFF ho) - refund claw-backs	wallet_transactions, positive rows aur refund rows, range ke andar bani
Total Cost	Chat cost + Image cost + Estimate cost, client price par	wallet_transactions, negative rows jin ka feature 6 AI features mein se ho, range ke andar bani
Total Profit	Total Revenue - Total Cost	Calculated
Profit Margin	Total Profit / Total Revenue x 100. Revenue 0 ho to dash.	Calculated

Tiles ke theek neeche ek grey line formula ko live amounts ke saath print karti hai: paid top-ups, admin-granted credits, refunds, cost ka kitna hissa free credits se ada hua, aur non-usage debits jo Cost se bahar rakhe gaye. Total audit karna ho to yahan se shuru karein.

Table ke columns

Column	Matlab	Source
Sub-account	Client ka company name. Flagged test accounts par internal badge.	clients.company_name
Plan	Subscription plan ka naam, na ho to dash.	subscription_plans via client_subscriptions
Revenue	Range mein is client se aaya paisa, tile wala formula. Bar sab se bade client ke muqable mein hai.	wallet_transactions
Cost	Range mein charge hui AI usage (ya chune hue product ka hissa).	wallet_transactions

Column	Matlab	Source
Chats	Range mein AI chat jawabon ki tadaad (ring chat + help chat).	ai_usage_logs + ai_usage_monthly_summary
Images	Range mein AI image renders ki tadaad (ring, grillz, enquiry).	wahi
Estimates	Range mein cost estimates ki tadaad.	wahi
Wallet	Aaj ka purchased credit balance. Free credits is mein shamil nahi (drawer dekhein).	client_wallets.balance (live)
Profit	Is client ka Revenue - Cost. Positive ho to green, negative ho to red.	Calculated
Margin	Profit / Revenue. Range mein revenue na ho to dash.	Calculated

4. Client card (drawer) kaise parhein: IRIS FINE JEWELS ki misaal

Kisi bhi row par click karne se daayen taraf client ka card khulta hai. Neeche 30 Oct 2026 ke IRIS FINE JEWELS LTD. ke card ke asli numbers se har box ka matlab samjhaya gaya hai (range: pichle 120 din).

Upar ke 8 boxes

Box	IRIS value	Matlab
Plan	Custom X	Client ka subscription plan.
Wallet Balance (purchased)	$60.47	Aaj is waqt client ke paas kitna khareeda hua credit bacha hai. Yeh JewlX par ek zimmedari hai: client ne paisa de diya, service abhi baqi hai.
Free Credits Left	$0.00	Is mahine ka free allowance kitna bacha hai. $0 ka matlab free credits khatam, ab har request purchased wallet se kat rahi hai.
Purchased credits expire	Sep 22, 2027	Agar client kuch na kare to $60.47 is din zero ho jayega (aakhri top-up se 365 din). Har naya top-up yeh tareekh aage barha deta hai.
Revenue (range)	$100.00	Range mein is client se aaya asli paisa.
Cost (range)	$92.30	Range mein is client ki AI usage, client price par. Is mein free credits wali usage bhi shamil hai.
Profit	$7.70	Revenue - Cost = 100 - 92.30. Green yani positive.
Margin	7.7%	Profit / Revenue. Yani har $1 revenue par $0.077 bacha (client price ke hisaab se).

'Where the numbers come from' box

Line	IRIS value	Matlab
Paid top-ups (Stripe)	$100.00	Stripe se aaya paisa (credit pack ya auto-recharge). Yeh asli revenue hai.
Admin-granted credits	$0.00	Admin ne haath se jo credits diye. Yeh paisa nahi hota.
Refund claw-backs	$0.00	Refund par wapas liye gaye credits. Revenue se minus hote hain.
AI Chat usage	$0.00 - 0 chats	Client AI chat use nahi karta (Ring OS chat optional hai).
AI Image usage	$92.30 - 479 images	479 AI image renders, total $92.30 charge. Poori cost yahin se aayi.
Cost Estimate usage	$0.00 - 0 estimates	Koi cost estimate nahi.
...of which paid with free credits	$52.78	$92.30 mein se $52.78 free monthly credits se ada hua. Yeh JewlX ka tohfa tha, client ke $100 se nahi kata.

Line	IRIS value	Matlab
Non-usage debits	$0.00	Expiry ya admin reset jaisi kat-oti. Cost mein shamil nahi. Yahan koi nahi.

Card ke numbers aapas mein kaise milte hain (sabit karne ka tareeqa)

Cost $92.30 ke do hisse hain: $52.78 free credits se, baqi **$39.52 purchased wallet se**. Client ne $100 diye, us mein se $39.52 kharch hue, to wallet mein $60.48 bachna chahiye. Card $60.47 dikhata hai (1 cent rounding ka farq, kyunke har render $0.072 jaisi chhoti raqam hai). Yani Revenue, Cost, free share aur Wallet chaaron ek doosre ki tasdeeq karte hain.

Faida ho raha hai ya nuqsan? Teen nazar se dekhein

Nazar	IRIS par hisaab	Kya samajhna hai
1. Page ka Profit (client price par, free credits bhi cost)	100 - 92.30 = +$7.70 (7.7%)	Sab se sakht (conservative) nazar. Free credits ki usage ko bhi poori client price par cost gina. Positive hai, to is sakht paimane par bhi faida hai. Margin kam is liye hai ke $52.78 ki usage muft di gayi.
2. Cash nazar (sirf jo client ke paise se kata)	Paisa aaya $100; purchased se kharch $39.52; wallet mein baqi $60.47	Aaj tak $100 JewlX ke paas hai, aur $60.47 ki service abhi deni baqi hai. Yeh 'pehle se mil gaya paisa' hai, pura profit nahi.
3. Supplier nazar (andaza)	Supplier cost lagbhag 92.30 / 1.8 = ~$51	Client price = supplier cost x multiplier (code mein 1.8x). To 479 renders ka asli AI bill takreeban $51 hoga. $100 aaye, ~$51 kharch hue: ab tak ~$49 bach raha hai, magar $60.47 ki service ab bhi deni hai jis par mazeed ~$33 supplier cost aayegi.

Asaan rule: Card par Profit green ho to client price ke hisaab se aap faide mein hain. Agar Profit red ho, pehle 'of which paid with free credits' dekhein: agar zyada tar cost free credits se hai to woh JewlX ka marketing kharch hai, client ne nuqsan nahi karwaya. Agar Revenue $0 ho aur Cost ho, to client sirf free tier par chal raha hai.

Neeche ki transaction list

Aakhri 50 wallet transactions (all time, range se bahar bhi). Har line par: description (feature, model, aur yeh ke free credits se kati ya purchased se), tareekh, type, aur raqam. IRIS ki lines 'ring_preview (google/gemini-3.1-flash-image-preview) (purchased) -$0.07' ka matlab: Ring OS ki ek AI image, Gemini model se, $0.072 charge, purchased wallet se kati. Cost $92.30 / 479 = $0.19 fi image is liye hai ke pehle (range ke shuru mein) fi image price zyada thi; AI Cost settings mein multiplier ya base cost badalne se naye renders sasti price par charge hote hain, purane apni purani price par rehte hain.

5. Subscription Products tab, ek ek item

Yeh tab aaj ka snapshot hai, is liye date range yahan lagu nahi hoti aur date pickers chhupe hue hain. Yeh har client ka subscription record aur plan price parhta hai.

Item	Matlab	Source / formula
Active Subscriptions (tile)	Un clients ki tadaad jin ka subscription status active hai.	client_subscriptions.status = active
Monthly Recurring Revenue (tile)	Tamam active subscriptions ki mahana plan price ka total.	subscription_plans.price_monthly, sirf active
Est. Lifetime Revenue (tile)	Ab tak bill hui plan fees ka andaza, tamam clients ka total.	Neeche wale column ka total
ARPU (tile)	Fi active subscription average mahana revenue.	MRR / Active Subscriptions
Plan / Price	Plan ka naam aur mahana list price.	subscription_plans
Status	active, trialing, past_due, canceled, none. 'cancels' tab lagta hai jab period ke aakhir par cancellation scheduled ho.	client_subscriptions.status, cancel_at_period_end
MRR (column)	Active ho to plan price, warna dash.	tile jaisa
Est. Lifetime Rev. (column)	Plan price x 30-din periods, trial ke khatam hone (ya shuru) se aaj tak, ya cancellation tak. Sirf active, past_due aur canceled rows ke liye. Sirf-trial aur 'none' rows par dash.	client_subscriptions.created_at, trial_end, updated_at, status
Started	Subscription record kab bana.	client_subscriptions.created_at
Billing since	Jis tareekh se billing shuru maani gayi (trial end ya start). Koi period bill na hua ho to khaali.	Derived
Renews	Maujooda billing period ka ikhtitaam.	client_subscriptions.current_period_end

Zaroori: Est. Lifetime Revenue plan price aur guzre waqt se andaza hai. Platform plan fees ke Stripe invoice totals store nahi karta, is liye asal wasool hua subscription paisa Stripe dashboard mein dekhna hoga.

6. Accuracy checks jo kiye gaye

Development PC se live database access nahi hai (is machine ka Supabase tooling kisi aur project mein signed in hai, aur browser extension disconnected hai). Is liye yeh check chain ke har component ka maujooda code parh kar kiya gaya, aur nateejay code ke facts hain. Section 9 mein ek query hai jo team live database par chala kar totals confirm kar sakti hai.

#	Sawal	Nateeja
1	Kya har AI request theek ek usage-log row aur ek (ya split pair) wallet charge row banati hai?	Haan. Ek shared helper dono kaam, isi tarteeb se, chhay functions ke liye karta hai (ring-chat, jewelx-help, generate-ring-preview, generate-grillz-preview, generate-enquiry-preview, estimate-lead-cost).
2	Kya charge row ka feature name classification se mismatch ho sakta hai?	Nahi. Description hamesha 'feature (model)' hoti hai aur metadata mein feature hota hai. Page pehle metadata parhta hai, phir description fallback.
3	Kya joins se kisi client ke figures double ho sakte hain?	Nahi. client_wallets aur client_subscriptions dono par unique client_id index hai.
4	Kya archive kiye mahine do baar gin sakte hain?	Nahi. Archive job monthly summary mein insert aur live rows delete ek hi transaction mein karta hai.

#	Sawal	Nateeja
5	Kya koi positive wallet row unclassified reh gayi?	Nahi. Code mein sirf topup, auto_recharge aur credit likhe jate hain; pehle do paid, teesra admin-granted.
6	Kya koi negative wallet row ghalti se Cost mein gin rahi hai?	Nahi. Expiry, refund, admin reset aur admin pause sab non-usage bucket mein jate hain aur alag print hote hain.
7	Kya refunds ek baar handle hote hain, do baar nahi?	Haan. Refund row Revenue se minus hoti hai aur Cost se bahar.
8	Kya range ke kinare theek kaam karte hain?	Haan. Start aur end din browser ke local time mein poore din bheje jate hain.
9	Kya dono tabs admin dashboard wala internal flag parhte hain?	Haan.

7. Figures jo ghalat lagti hain magar sahi hain

Yeh woh patterns hain jin par sab se zyada sawal uthta hai. Har ek data ka expected behaviour hai, bug nahi.

1. Client par Cost hai magar Revenue $0, to Profit negative

Client free monthly credits par chal raha hai (ya range se pehle khareede credits par). Usage charge hui, magar range mein paisa nahi aaya. Drawer ki 'of which paid with free credits' line batati hai kitni cost free credit thi. Free tier accounts ki yeh normal tasveer hai.

2. Platform ka Total Profit negative

Wahi wajah platform level par. Agar zyada tar accounts free credits par hain to un ki usage asli cost hai jis ke muqable revenue nahi. Grey formula line mein 'covered by free monthly credits' dekhein: 30 Oct ki screenshot mein $299 cost mein se $194.89 free credits se tha. Yani paying clients ke paise se sirf $104 kata, jab ke $175 aaya.

3. Revenue us mahine dikhta hai jis mein usage nahi, ya usage us mahine jis mein revenue nahi

Top-up ek musht raqam hai; usage agle hafton ya mahino mein phailti hai. 30 din ki window ek ko pakar leti hai, doosre ko nahi. Margin ke sawalon ke liye lambi range lein.

4. Chats 0 hain halanke client chat karta hai

Do cheezein dekhein: (a) kya client ka widget AI chat use kar bhi raha hai (Ring OS chat fi client optional hai), (b) range. Counts ab archive samet hain, 90 din se purane counts ab ghaib nahi hote.

5. Ek client ke counts aur Cost bilkul match nahi karte

Do jaiz wajuhat. Pehli: request kamyab ho magar charge ke waqt wallet khaali ho, to usage row likh jati hai aur charge mana ho jata hai, yani count hai cost nahi. Doosri: monthly archive poora ginta hai; agar range mahine ke beech shuru ya khatam ho to us archived mahine ka poora count shamil hota hai.

6. Refund ki wajah se Revenue Stripe payments se kam lagta hai

Design ke mutabiq sahi: refund raqam minus hoti hai. Drawer refund line alag dikhata hai.

7. 'Paid top-ups only' ON karne se Revenue kam ho jata hai

Farq theek utna hai jitne admin-granted credits range mein the (grey formula line mein likha). Woh kabhi paisa the hi nahi.

8. Deleted ya inactive client ab bhi list mein hai

History rakhi jati hai taake purana revenue totals se gum na ho. Range mein jis client ki koi transaction nahi, woh bas zero dikhata hai.

9. Wallet balance Revenue - Cost se kam hai

Wallet aaj ka purchased balance hai, range ka figure nahi. Range se pehle kharch hue credits, expired credits aur admin resets sab is ko kam karte hain magar range ki Cost mein nahi aate.

10. Est. Lifetime Revenue Stripe se mukhtalif hai

Yeh plan price x guzre 30-din periods hai, invoices nahi. Discounts, failed payments, plan changes aur proration platform ko maloom nahi.

8. Data ki maloom limits

- **Cost client price hai.** Har charge AI Cost settings ka base cost x multiplier hai, yani Cost woh hai jo clients ko bill hua, JewlX ka supplier bill nahi. Mota andaza: Cost ko us waqt ke multiplier se taqseem karein (code ka fallback 1.8x maanta hai). Fi request asli supplier cost store nahi hoti, is liye purani tareekhon ka sahi supplier margin nikalna mumkin nahi.
- **Subscription paisa andaza hai.** Plan fees platform mein invoices ke tor par record nahi hotin; section 5 dekhein.
- **Admin mein teen mukhtalif 'revenue' numbers hain.** Is page ka Usage tab = AI credit ka paisa. Is page ka Subscription tab = plan fee ka andaza. Main admin dashboard ka revenue tile = orders table se Shopify / Ring OS orders ka revenue. Teeno alag cheez naaptay hain, inhein aapas mein kabhi compare na karein.
- **Archive ki granularity.** 90 din se purani usage calendar mahine ke hisaab se rakhi jati hai, is liye mahine ke beech ka range edge us poore mahine ko ginta hai.

9. Page ko khud kaise verify karein

Admin ke andar fauri check (2 minute)

- Revenue & Usage kholein, Sub-account filter mein ek paying client chunein aur chhoti range rakhein (maslan un ke aakhri top-up ka mahina).
- Row par click karein. Drawer mein range ke andar ki transactions jama karein: positive rows Revenue ke barabar honi chahiyen, AI-feature wali negative rows Cost ke barabar, aur expiry / admin rows non-usage line mein aani chahiyen, Cost mein nahi.
- Paid top-ups only toggle karein. Revenue theek utna girna chahiye jitna grey formula line mein admin-granted likha hai.
- Chats / Images counts ko usi client ki AI Usage screen se, unhi tareekhon par, compare karein.

Database cross-check (developer ke liye, Supabase SQL editor)

Page wali start aur end ke saath chalayein. Dono result sets page ke Total Revenue aur Total Cost se match hone chahiyen jab 'Paid top-ups only' OFF aur internal accounts OFF hon.

```

```

10. Deployment ki soorat-e-haal

- Fix commit 9c06c41e (21 Oct 2026) main par hai aur auto-deploy ho chuka. Is page ki koi file us ke baad nahi badli.
- Database migration 20261021120000 apply ho chuki lagti hai: Lovable ki live database se regenerate ki gayi type file (29 Oct) mein naya function shape maujood hai. Tasdeeq: agar page bina error banner ke khulta hai to migration live hai, kyunke page ab aisa parameter bhejta hai jo purana function qubool nahi karta tha.
- Scope se bahar magar ticket ke qabil: monthly free-credit cron function ab bhi do purane column names use karta hai aur ghaliban har mahine fail hota hai; clients ko free grant pehli use par fallback se mil jata hai. Is page ke kisi figure par asar nahi.
